WATER POLLUTION

What is water pollution?

Water pollution is the process which happens when pollutants contaminate water. Contamination of water bodies like lakes, rivers, oceans and groundwater occur when pollutants are discharged directly or indirectly into water bodies without any treatment to remove harmful compounds. Water pollution has become a global concern now as many deaths and diseases are caused by drinking impure, dirty water. Many countries like India and China lack adequate amount of safe drinking water and thousands die every day due to drinking contaminated water. Even developed countries like the United States of America suffer from the issue of contaminated water. When water is affected by anthropogenic (caused by humans) contaminants, it is said to be polluted. This means that this water is not safe for drinking purposes.

Who pollutes water?

Earthquakes, volcano eruptions and natural environmental disasters add a large amount of pollution to water bodies. Human and animal waste too, pollute water and make it harmful for consumption.

Every year tonnes of industrial waste and toxic chemicals from factories and manufacturing plants are released directly into water bodies, without proper waste management or recycling, harming the balance of water bodies.

Wastes from humans and animals too pollute water and make it harmful for consumption. Toxic chemicals discharged directly into water bodies without control or contamination management, also pollute water and cause irreparable harm to marine life.

Some common ways water is polluted

1. Oil spills from huge ships
2. Leakage of fuel from boats
3. Chemical waste from industries
4. Plastics thrown in rivers
5. Mining
6. Dumping trash into water bodies
7. Sewage water produced by households
8. Burning of fossils fuels like coal and oil
9. Chemical fertilizers

Types of water pollution

1. Nutrients pollution : Industries throw their wastes like fertilizers, waste water and sewage into river bodies. These make weed and algae grow rapidly in the water, making it unsuitable for drinking while depleting the level of oxygen in the water. This harms the organisms living in water.

2. Surface water pollution : Ground pollutants like chemical wastes, insecticides and other wastes mix with rain water run offs, dissolve and mix with water bodies like streams, rivers and lakes. This is known as surface water pollution.

3. Oxygen depletion : Water contains aerobic and anaerobic organisms, i.e., organisms which need oxygen to grow and which die in oxygen, respectively. With an increase in water pollutants, the oxygen level will deplete, leading to the death/choking of aerobic organisms.

4. Ground water pollution : Chemicals and pesticides are used in growing crops. These harmful substances enter the ground along with rainwater and cause the water table to get contaminated. This is known as groundwater pollution. They also enter lakes and rivers when groundwater spills occur.

Effects of water pollution

The accumulation of garbage in our water bodies come from human activities and neglect and total disrespect for our natural resources. The effects of water pollution are gory and have long term effects which are very difficult to undo. It makes sea creatures like fishes, sea turtles, seals and even birds die, because materials such as plastic is mistaken as food by animals and eaten. Since it cannot be digested, it sometimes causes death in some cases.

Unclean and contaminated water causes human deaths and diseases. In many places, water comes in contact with industrial and human wastes and people drink such contaminated water. They are prone to deaths and diseases like hepatitis, cholera or typhoid. Water pollution accounts for as many as three million deaths every year, most of which are children.

Water pollution disrupts the food chain on land, water and air. Tiny animals eat toxins along with their food. Bigger animals eat smaller animals. This leads to high levels of chemical toxicity in bigger animals. Toxins accumulation from the lower level to higher level of the food chain occurs.

Things that you can do to conserve water and make it safe :

- Water is precious, so use water wisely. Do not waste water in the shower and always close taps when not in use.
- Do not throw paint, oil, medicines or plastic down your toilet drains. Contact your municipal corporation for help with disposing chemicals or medicines.
- Plant lots and lots of trees around your homes to encourage clean rain water to replenish your water table/ground water and adopt rain water harvesting.
- Farmers can be encouraged to use Integrated Pest Management techniques to control pests and reduce dependency on chemical pesticides.

Monday

1. $80 - 8 =$ _____

2. $85 + 78 =$ _____

3. $21 - 2 =$ _____

4. $64 \div 2 =$ _____

5. $3 \times 3 =$ _____

6. Write the numeral for four thousand, two hundred and forty-one: _____

7. Complete this counting pattern:

69, 73, 77, 81, _____, _____, _____

8. What is the sum of 75 and 11? _____

9. Divide 42 by 6. _____

10. 20 cents + 5 cents + \$1.00 = _____

11. 50 cents + 10 cents + \$1.00 = _____

12. What digital time does the clock show?

13. How many minutes from 8 am to 9 pm? _____

14. What is the name of this 3D object?

15. Which star has the highest chance of being selected? Black or white? _____

Tuesday

1. $97 - 6 =$ _____

2. $56 + 40 =$ _____

3. $61 + 49 =$ _____

4. $27 \div 9 =$ _____

5. $4 \times 8 =$ _____

6. Write these numbers in descending order: 6673, 8544, 2566, 6069, 2541, 2275.

7. Complete this counting pattern:

58, 62, 66, 70, _____, _____, _____

8. In a group of 79 students, 4 would like to play softball and the rest want to play rugby league. How many want to play rugby league? _____

9. What is the product of 7 and 8? _____

10. 10 cents + 50 cents + \$2.00 = _____

11. \$1.00 + 10 cents + 50 cents = _____

12. If it was 2:45 in the afternoon, would you write am or pm? _____

13. How many weeks is 49 days? _____

14. What is the name of this 3D object?

15. Which circle has the highest chance of being selected? Black or white? _____

WEEK 3 Position Independent Task

1. Answer the question by using a cross (X) in the grid.

2. a) _____ b) _____ c) _____

3. a) _____

b) _____

c) _____

4. a) _____

Subtraction

1. Complete the 3-digit algorithms (trading in tens).

a	b	c																																													
<table border="0"> <tr><td>Hund</td><td>Tens</td><td>Ones</td></tr> <tr><td>7</td><td>4</td><td>8</td></tr> <tr><td>-</td><td>3</td><td>7</td></tr> <tr><td colspan="3"><hr/></td></tr> <tr><td colspan="3"> </td></tr> </table>	Hund	Tens	Ones	7	4	8	-	3	7	<hr/>						<table border="0"> <tr><td>Hund</td><td>Tens</td><td>Ones</td></tr> <tr><td>8</td><td>3</td><td>3</td></tr> <tr><td>-</td><td>6</td><td>5</td></tr> <tr><td colspan="3"><hr/></td></tr> <tr><td colspan="3"> </td></tr> </table>	Hund	Tens	Ones	8	3	3	-	6	5	<hr/>						<table border="0"> <tr><td>Hund</td><td>Tens</td><td>Ones</td></tr> <tr><td>6</td><td>4</td><td>6</td></tr> <tr><td>-</td><td>3</td><td>7</td></tr> <tr><td colspan="3"><hr/></td></tr> <tr><td colspan="3"> </td></tr> </table>	Hund	Tens	Ones	6	4	6	-	3	7	<hr/>

Chocolate experiment worksheet

Question:

What will happen when different-sized pieces of chocolate are heated?
 Will they react the same?

Hypothesis:

I think ... _____

Materials:

List the items used.

- _____
- _____
- _____
- _____
- _____
- _____
- _____
- _____
- _____
- _____

Procedure:

1. Measure the following amounts of chocolate and place them on a paper plate.
 - Plate 1:** 12 g milk chocolate chips
 - Plate 2:** 12 g milk chocolate frog
 - Plate 3:** 12 g milk chocolate buttons
2. Place the plates in direct sunlight, or under a heat lamp if sunshine is limited.
3. Use a stopwatch to time how long it takes for the chocolate to change to liquid. If it doesn't melt after 10 minutes then record how soft the chocolate was.

Observations:

Chocolate chips	Chocolate frog	Chocolate buttons
Time taken to melt:	Time taken to melt:	Time taken to melt:
Description:	Description:	Description:

Conclusion and explanation:

Want To Help Save The World? Go Plogging!

Grab some friends and try this new trend for Earth Day.

What is plogging, you ask?

It's a fitness craze that started in Sweden and is spreading across Europe and through North America. Plogging has spread globally as a way to combine exercise and community service.

It's a combination of two words: jogging and the Swedish phrase for pick up, 'plocka upp'. Created by Erik Ahlström in 2016, plogging is an eco-friendly exercise through which people pick up trash while jogging or brisk walking outside. You can also "plog" while walking or hiking. It spread through word of mouth, and in 2017, the #plogging hashtag started showing up on social media. The rest is history.

Plogging is also exercise.

Plogging is a great outdoor workout! It not only involves jogging, but also bending, lunging, squatting and reaching.

A half-hour of jogging plus picking up trash will burn 288 calories for the average person, compared with the 235 burned by jogging alone. A

brisk walk will expend about 120. Organizations all across the US are using plogging for both the benefits of exercise, and to raise awareness about plastic and other types of pollution.

YOU are the change.

Plogging burns 50 more calories per half-hour than jogging alone.

Grab a plastic bag and gloves and pick up those empty water bottles, wrappers and boxes. Do you find it gross to pick up other people's garbage? It is gross! But do you know what's even more gross? The fact that it's sitting there in the first place. And YOU can be the person who takes responsibility for it and places it in the garbage, where it belongs.

It only takes one person to make a difference. Think your efforts will be too miniscule to count towards anything? Wrong! No effort is too small. A group of 10 to 15 people picking up litter for an hour can fill a whole pickup truck! How big do you want to think? If you bring your friends with you and pick up any garbage you see on an hour long walk/run, you'll be doing something awesome for the Earth, enjoying the spring weather AND giving your body exercise it craves.

Division with remainders

1. Use the multiplication and division facts to solve the number sentences.

- a $13 \div 4 =$ remainder
- b $10 \div 3 =$ remainder
- c $13 \div 3 =$ remainder
- d $12 \div 5 =$ remainder
- e $16 \div 5 =$ remainder

2. Solve the problems. The first one is done for you.

	Problem	Mental strategy	Answer
a	Farmer Ted has 28 sheep which are to be put in 3 paddocks. How many in each?	$9 \times 3 = 27$ and 1 more makes 28	<input type="text"/> 9 remainder <input type="text"/> 1
b	44 marbles were shared among 6 children. How many did each child receive?		<input type="text"/> remainder <input type="text"/>
c	48 dice were shared among 5 groups in the classroom. How many did each group receive?		<input type="text"/> remainder <input type="text"/>
