KAKADU NATIONAL PARK

What

Kakadu National Park is the largest national park in Australia.

History

Aboriginal people have lived in the Kakadu area for at least 50 000 years. Some of the rock art found in the Kakadu region is at least 20 000 years old.

Interesting Fact

The Kakadu National Park contains a wide range of landscapes including coastal and tidal flats, sandstone cliffs, woodlands, wetlands, hills and ridges. Some of the animals in this environment cannot be found anywhere else in the world.

When

Kakadu was first declared a National Park in 1979. It became a World Heritage site in 1981 and is considered a global treasure.

Where

Kakadu National Park is in the Northern Territory, around 170 kilometres east of the town of Darwin. It covers an area of almost 20 000 square kilometres.

Insects for Dinner

Imagine eating a plateful of crickets for dinner with chocolate-covered ants for dessert. It might not sound too appetizing to you, but around 2 billion people worldwide eat insects regularly as a part of their diet. Eating insects is called entomophagy and there are many good reasons to do it.

First off, insects are really good for you! They are packed with protein, fiber, vitamins and minerals. By weight, crickets and termites contain more protein than beef.

Second, raising insects is less expensive and better for the earth than raising livestock. Insects take up much less space and need much less food and water than cows. Also, more parts of an insect is edible than a cow or a chicken. In addition, insects have a much shorter lifespan, so the time spent raising them is much less than other edible animals.

Third, believe it or not, if prepared well, insects actually taste good! Many types of insects taste a little nutty, especially if they are roasted. Some kinds of bugs taste like bacon, while others may taste like fish, or even fruit. Some insects, such as meal worms, don't have much of a taste at all and pick up the flavours of whatever they are cooked with. So, what are you waiting for? Why not try a beetle today?

Comprehension Questions

1. What is entomophagy?

2. Give three reasons why raising insects is better than raising livestock.

1) _____

2) _____

3) _____

3. What is the author's purpose?

- How much would Mrs Krishan save in 5 weeks if she saved \$27 each week?
- How much would Mrs Gonzales save in 6 weeks if she saved \$35 each week?
- Ms Weng saved \$45 each week for 5 weeks. What are her total savings?
- Ms Ta saved \$36 each week for 7 weeks. What are her total savings?
- If Mr Truong saved \$34 each week for 7 weeks, would he have enough to buy a stereo for \$250?
- If Mr Laxa saved \$48 each week for 5 weeks would he have saved more than Mrs Gonzales?

Solve the following Math Problems.

Year 4 Daily Maths Problems

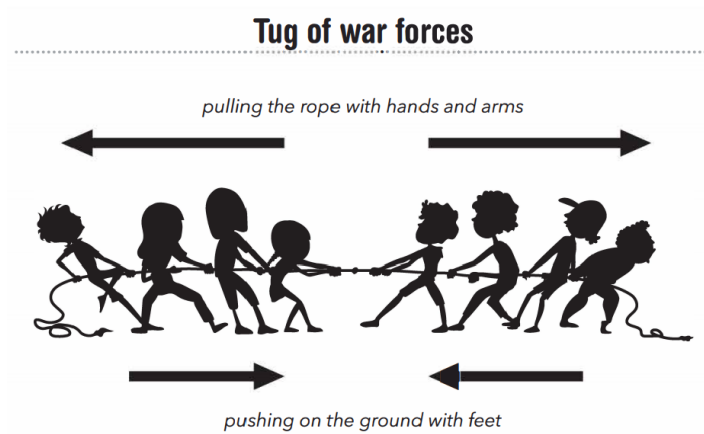

17 Mrs. Campbell had 19 students in her class at the start of the school year. At the end of the school year, Mrs. Campbell had 32 students in her class. How many students joined Mrs. Campbell's class throughout the year?

18 Matthew is looking forward to celebrating his birthday in 8 weeks and 2 days. How many days are there until Matthew's birthday?

19 Jimmy swims one lap of the swimming pool in 1 minute and 12 seconds. How long would it take Jimmy to swim 10 laps?

20 Rob used number cards to make a four-digit number. His number was 1054. He added 100 more to his number. What was his new number?

Push and Pull

What will happen if the following types of shoes are worn while playing Tug of war? Why?

Which shoe had the most friction?

Create a force diagram by drawing a picture of a shoe and label it with arrows to show which way the friction forces are moving?

Alligator or a Crocodile?

It's a reptile. It lives in the water and it has big, sharp teeth. Can you guess the animal? It's an alligator, of course...or is it a crocodile? Let's find out:

If it lives in salt water, such as an estuary or mangrove swamp, it is a crocodile. Crocodiles have special glands on their tongues to get rid of extra salt. Alligators don't have these glands, so they live in fresh water.

Alligators also have wider, U-shaped snouts, while a crocodile's snout is longer and more pointed, like a V. Also, crocodiles have teeth on their lower jaws that stick out. You can see them even when the crocodile's mouth is closed. Alligators do not have any teeth that stick out.

Comprehension Questions

1. What do alligators and crocodiles have in common?

2. How are alligators and crocodiles different?

3. Which text structure did the author use?

a) description b) cause and effect c) problem and solution d) compare and contrast.
Give evidence from the text to support your answer:

4. Is the animal closest to the bottom of the page an alligator or a crocodile? _____

Why I am Afraid of Balloons

Some people are scared of spiders, or snakes, or high places, or even of being stuck in a crowd. But, me, I'm afraid of balloons. How crazy is that? Most people love balloons. Still, I am not the only person who is afraid of them. I read about it on the internet. It's called globophobia.

I'm pretty sure I know how it started. I remember when I was little my mom gave me a balloon to play with. I was so little, I didn't even know what it was. It was bright red, so I thought it might be good to eat, like cotton candy. Well, you can guess what happened next. The loud popping noise so close to my face scared the daylights out of me and I started to cry. After that, I wanted nothing to do with balloons.

Normally, it isn't a problem. Balloons are not a part of my everyday life. But it can get embarrassing. Last week I was invited to my friend Lila's 10th birthday party. Of course, there were balloons. I was a nervous wreck! I kept covering my ears whenever I thought one might pop and pretending to go to the bathroom so I could get out of there. The other girls probably thought I was bananas, but I just can't help it!

Maybe when I grow up, I will invent a type of balloon that pops silently. Then I too, could have a party with balloons.
